

## Research Study Director\_ Pharmaco-Imaging & MRT

Oncodesign Services is a contract research organization (CRO) specializing in drug discovery and preclinical services. From target identification to IND filing, the company contributes to the development of innovative therapies in oncology, inflammation and infectious diseases. Based in Dijon, within the Paris-Saclay cluster and in Montreal, Oncodesign Services benefits from 2000 m<sup>2</sup> state-of-the-art chemistry and biology laboratories. The company has 230 employees in France, Canada and the United States.

With integrated solutions in medicinal chemistry, DMPK, Pharmaco-Imaging, bioanalysis, in vivo/in vitro assays and tumor models, Oncodesign Services supports the R&D programs of international clients. A pioneer in translational medicine, the company's challenge is based on accelerating pace for faster development - from the laboratory to the patient - but also on the development of a differentiated and innovative therapeutic proposition. To do this, Oncodesign Services uses new technological methods to identify and select the best drug candidates. Oncodesign Services has BSL1, BSL2 and BSL3 laboratories and all sites are AAALAC approved for animal testing. Oncodesign Services is a place with high skills in drug discovery and translational pharmacology.

### Why join us?

Do you like challenges? Do you want to participate in the discovery of new effective therapies against cancers and rare diseases? Do you want to join a human-centric company recognized for its technological innovation serving progress in therapies?

Within Oncodesign Services, you will evolve in a stimulating environment where your skills and expertise will be a real asset for the activities and projects developed by the company.

We are looking for scientists passionate about precision medicine, with experience in Pharmaco-Imaging and Molecular Radiotherapy (MRT) discovery and development, for standalone, for integrated service activities and internal R&D programs. Two positions are available at our Dijon site (21).

### Your mission:

As part of the activities of the Pharmaco-Imaging & Molecular RadioTherapy department, you will evolve in a stimulating environment where imagination and taking initiative are extremely appreciated. As part of a multidisciplinary team, you will ensure the conduct and control of the studies (internal/external) entrusted to you.

- Guarantee the drafting of proposals, detailed scientific protocols, the identification of possible regulatory constraints, the interpretation of results, the monitoring of budgets and the conformity of study documentation
- Manage and supervise the proper execution of experiments and ensure the scientific quality of the studies entrusted
- Have a functional leadership role within the different teams
- Actively contribute to the proper functioning and development of the team

Finally, you will actively contribute to the proper functioning of your department and you will participate in the development of Oncodesign Services's scientific expertise.

### Who are you?

Doctor/PhD with a background in biology and/or chemistry, you have skills in the development of Radiopharmaceutical Theranostics, ideally have experience in preclinical nuclear medicine and you have already participated/led similar projects/programs.

Versatile, you have very good analytical and synthesis skills and your organizational and management skills allow you to prioritize and simultaneously lead several projects until their completion in a rapidly changing environment. You are able to propose effective solutions supported by solid scientific justification.

Finally, an excellent communicator, you master English (written and oral) and you have good abilities to work and collaborate in an international environment.

If you are interested, send us your application cover letter and your CV in French and English, to [contact.rh@oncodesign-services.com](mailto:contact.rh@oncodesign-services.com)
